

Award Nomination App Documentation Map

This folder is a clean, reverse-engineered documentation package for the Award Nomination App. It is intentionally separate from the existing **Documentation** folder.

The documentation is organized as four named volumes. The numeric prefixes keep the folders in reading order; the folder names describe the purpose of each collection.

Structured diagram sources are stored separately from the prose documents:

Location	Purpose
diagrams/structurizr/workspace.dsl	Structurizr DSL source for system context, container, data model, workflow, payroll, model lifecycle, and deployment views.
diagrams/structurizr/README.md	Rendering instructions and mapping from view keys to documentation diagrams.
diagrams/exports	Rendered SVG diagram exports embedded in the Markdown documents.

01 - Business and Product

Document	Audience	Purpose
01_Executive_Overview.md	Executives, investors, grant reviewers, tenant sponsors	Explains the product, value proposition, current state, and strategic direction.
02_Business_Architecture.md	Business owners, product leaders, HR stakeholders	Defines business capabilities, personas, workflow, tenant model, and governance processes.
03_Product_Positioning.md	Sales, marketing, product strategy, buyers	Positions the product in the market and describes differentiators.
17_Demo_and_Sandbox_Guide.md	Demo hosts, evaluators, pilot tenants	Provides demo scenarios, roles, and validation paths.
18_Roadmap_to_Integrity_Sentinel.md	Product leadership, investors, architecture reviewers	Connects the Award Nomination App to the broader Integrity Sentinel direction.

02 - Solution and Technical Architecture

Document	Audience	Purpose
04_Solution_Architecture.md	Architects, senior engineers, technical reviewers	High-level component, actor, deployment, and workflow architecture.
05_Technical_Architecture.md	Engineering teams, platform teams	Frontend, backend, service, identity, observability, and infrastructure architecture.
07_Data_Architecture.md	Data engineers, DBAs, analytics reviewers	Conceptual, logical, and physical data design.
08_AI_ML_Architecture_and_Model_Governance.md	ML reviewers, risk teams, architects	Fraud, graph, semantic, forecasting, model governance, and human review design.
09_Security_Architecture.md	Security, enterprise buyers, platform reviewers	Identity, authorization, tenant isolation, secrets, network, audit, and threat model.

Document	Audience	Purpose
10_Integration_Architecture.md	Integration teams, implementation partners	Payroll, identity, email, analytics export, and future HRIS integration patterns.

03 - Engineering Design and API

Document	Audience	Purpose
06_Detailed_Design.md	Developers, maintainers, implementation reviewers	Endpoint, workflow, async processing, configuration, and implementation detail.
14_API_Specification.md	Frontend developers, integrators, testers	Human-readable API reference grounded in the FastAPI routers.

04 - Operations, Governance, and Readiness

Document	Audience	Purpose
11_Deployment_and_DevOps_Architecture.md	DevOps, platform engineers, release managers	Azure topology, Terraform modules, GitHub Actions, environments, rollback.
12_Observability_and_Operations_Guide.md	Operators, SRE, support	Logging, metrics, traces, dashboards, health checks, and runbooks.
13_Tenant_Onboarding_Guide.md	Customer success, tenant admins, implementation teams	Tenant setup, branding, user import, roles, workflow, go-live checklist.
15_Test_Strategy_and_Quality_Plan.md	QA, engineering leads, release approvers	Test layers, scenarios, non-functional validation, release gates.
16_Compliance_Risk_and_Governance.md	Risk, legal, security, enterprise buyers	Risk register, privacy, AI governance, auditability, SOC 2 readiness direction.

Source Baseline

These documents were reverse engineered from the repository as of July 7, 2026, with emphasis on:

- **frontend/src** React, MSAL, tenant configuration, analytics, HRBP, payroll, and i18n code.
- **backend** FastAPI routers, auth, SQL helper, fraud model loader, and Alembic migrations.
- **integrity-check** async submission-time fraud and description quality worker.
- **auxiliary-service** Service Bus notification and payout orchestration worker.
- **payroll-broker** provider broker, payroll worker, Gusto/Rippling provider structure.
- **fraud-analytics-job** weekly graph, ML training, holiday sync, and forecasting job.
- **terraform, Deployment, .github/workflows, Observability**, and analytics KQL assets.

Known Documentation Assumptions

- The product is treated as a tenant-configurable SaaS platform, not only a demo application.
- Azure SQL is the system of record.
- Entra ID is the primary identity provider.
- Azure Service Bus is the event backbone.
- Azure Container Apps, Static Web Apps, Front Door, Key Vault, Storage, Application Insights, and Log Analytics are the target Azure platform components.

- Payroll integrations include implemented broker support for Gusto and Rippling structure, with Workday references present as webhook/proxy patterns and future integration direction.
