

Award Nomination App Documentation

This folder contains the Codex-generated documentation package for the Award Nomination App.

Start with [00_Documentation_Map.md](#). It organizes the full set into business/product, architecture, engineering design, operations, governance, tenant onboarding, demo, and roadmap documents.

The documents are grouped into named volumes:

- [01_Business_and_Product](#)
- [02_Solution_and_Technical_Architecture](#)
- [03_Engineering_Design_and_API](#)
- [04_Operations_Governance_and_Readiness](#)

Structured diagram sources live under [diagrams](#):

- [diagrams/structurizr/workspace.dsl](#) contains the Structurizr DSL workspace.
- [diagrams/structurizr/README.md](#) maps view keys to the original diagrams and explains rendering/export options.
- [diagrams/exports](#) contains rendered SVG diagram outputs referenced by the Markdown documents.

The package was reverse engineered from the current repository and is intentionally separate from the existing [Documentation](#) folder.
